

ABSTRACT OF THE DISCLOSURE

Improved organophotoreceptor comprises an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive element comprising:

- 5 (a) a charge transport material having the formula

where X and X' are, each independently, a (9-fluorenylidene)malononitrile group, and Z is a linking group; and

- (b) a charge generating compound.

- 10 Corresponding electrophotographic apparatuses and imaging methods are described.
